How to use FCUTeam Bot

FCUTeam Bot · app version **1.0.0** · Windows 64-bit · website **fcuteam.com** · **Khal Tecnologia**

This manual is for you: you play EA SPORTS FC Ultimate Team on PC, you bought an FCUTeam Bot license, and you want to set up automatic buying and reselling on the transfer market.

> **About the labels:** buttons, fields, tabs and statuses are shown **in bold, as they appear when the panel is set to Portuguese**. The panel has a language switch (PT / EN / ES). If you use the panel in English, the English label is given in parentheses the first time it appears, e.g. **Parar** (on screen in English: "Stop"); some field labels appear in capitals on screen and are written that way. For a few labels only a short explanation is given in parentheses, e.g. **Iniciar** (start); that explanation is not the on-screen text. Messages and log lines are quoted in Portuguese, followed by a translation. EA in-game names are also given in Portuguese (as in the Portuguese Web App), with the English client name where useful (Transfer Targets, Transfer List).

⚠️ Important warning: EA Terms of Service

> **Automating the transfer market violates EA's Terms of Service.** Your account can be suspended or banned, and you can lose your club, your coins and access to the game.
>
> - FCUTeam is **not affiliated** with Electronic Arts and **does not guarantee** that the bot will keep working after a game update.
> - What weighs most on the risk is the **pace** (searches too close together), not just "having the program open". The factory defaults in the **Segurança** (on screen in English: "Safety") tab are slow on purpose. If you lower those timings, you take on that risk.
> - If EA asks for a visual verification (captcha), the bot **stops** and goes to **Bloqueado** (blocked). Solve the verification on the game screen. Do not keep restarting the bot or trying to push through.
> - The bot **does not prevent bans** and **does not guarantee profit**.

---

1. What you need

1. A PC running **Windows 64-bit**. There is no macOS version and no mobile app for this product.
2. An FCUTeam Bot license bought at **fcuteam.com**. The key comes in the purchase e-mail and is also in your account on the site.
3. Your EA account with access to your **EA SPORTS FC Ultimate Team** club. You log in yourself, in the official EA Web App shown inside the app.
4. An internet connection (the app needs to reach the site to validate the license; see "Offline" in section 2).

About the license:

- One license works on **one computer at a time**.
- The license covers one **major version**. The current version is **1.0.0**, and the license covers major **1.x**. If you bought 1.x, you do not receive an update that requires a different major version.

About your EA account: the app does not ask for your EA password and does not send your password to the FCUTeam website. E-mail, password and verification code go straight to EA, on the Web App screen.

---

2. First use

1. Sign in to your account at **fcuteam.com**, go to the bot licenses area, and download the Windows installer (for example, `fcuteam-bot-1.0.0-setup.exe`).
2. Run the installer. Windows may show a warning on first launch (SmartScreen / Smart App Control) because the installer **has no code-signing certificate** (digital signature). That alone does not mean it is a virus; it is the missing signature. You decide whether to run it.
3. Open the app. Without a license, the market tabs are locked with the text: "Ative sua licença na aba Licença para liberar o bot." ("Activate your license in the Licença tab to unlock the bot.")
4. Go to the **Licença** (on screen in English: "License") tab.
5. Paste the key from your purchase e-mail (or from your account at fcuteam.com). The format shown in the field is `UTB1-XXXX-XXXX-XXXX-XXXX`.
6. Click **Ativar** (activate).
    - If the license is already active on another machine, the message asks you to free the slot at fcuteam.com. See "License on another PC" in section 7.
    - If the key is for a different major version, the message asks you to download the correct version from your account.
7. With the license active, the **Iniciar** (start) button is unlocked. Before that it is disabled.
8. In the game half of the window (the Web App, on the right), log in to EA **and** enter your Ultimate Team club. The EA login screen alone is not enough.

9. The status stays at **Aguardando login** (waiting for login) until the club talks to the game server. If the club is already open and the status does not change, click **Recarregar** (on screen in English: "Reload").
10. When the **Registro** (on screen in English: "Log") shows "Sessão do Ultimate Team detectada." ("Ultimate Team session detected."), set up the **Mercado** (on screen in English: "Market") tab (section 4) and click **Iniciar**.

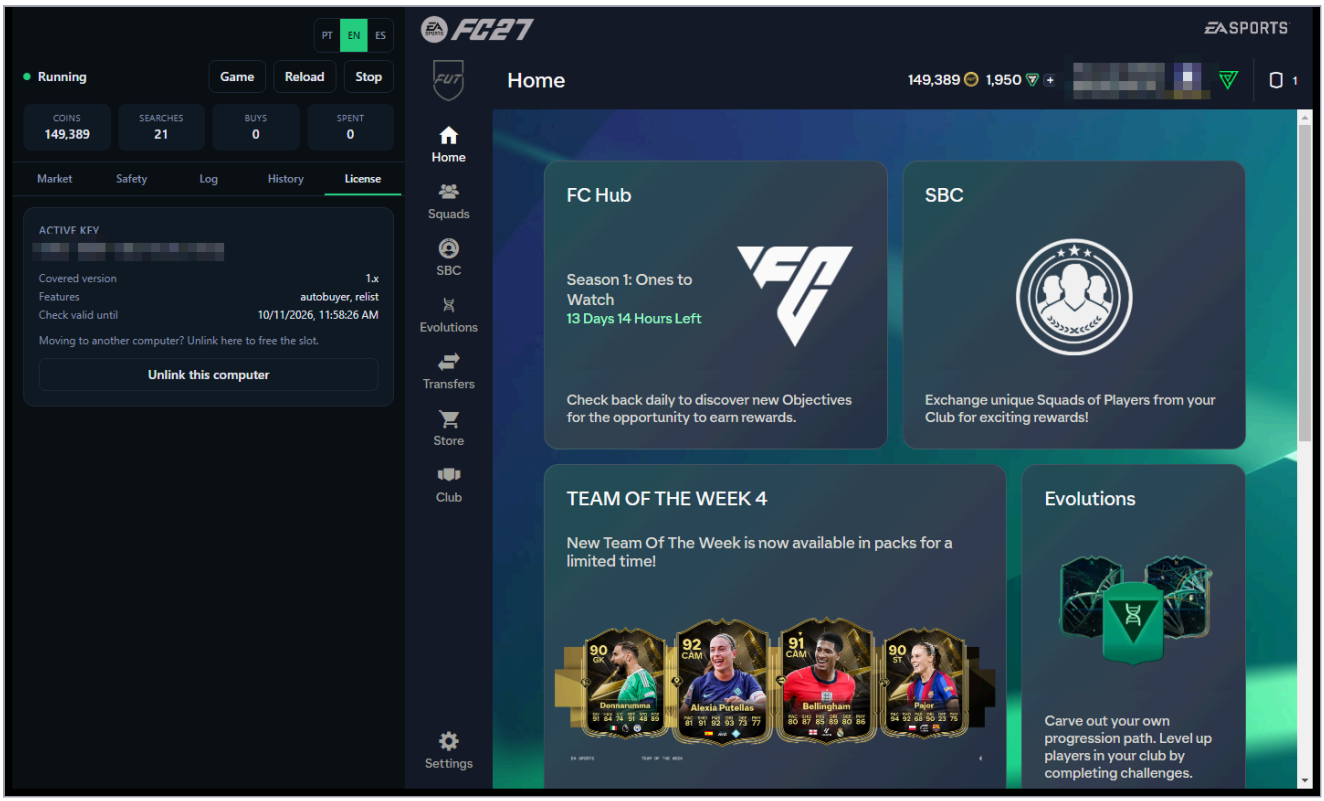

Figure 1 — The Licença tab, shown in English as "License", with an active license: key (hidden in the image), "Covered version" 1.x, "Features" autobuyer, relist, "Check valid until", and the "Unlink this computer" button.

Saved EA session: the EA session is saved on this Windows, in this installation, so you are not asked to verify every day. It is still your own EA account.

Offline (grace): if the internet goes down, the app can keep running for a while on the last license validation. A license that was cancelled, or a PC unlinked on the server, stops working as soon as the app can reach the site, or when the saved check period ends.

Using this PC again: if this computer was unlinked and you want to use it again, just **activate again** with the same key.

---

3. The window

The window has the **control panel** and, next to it, the **official EA Web App** (the same Ultimate Team page you use in a browser).

Top bar (always visible)

Control	What it does
Language (PT / EN / ES)	Panel language. The default follows Windows (Portuguese, Spanish or English).
Dot + status	**Parado**, **Aguardando login**, **Rodando**, **Descansando**, **Em espera**, **Bloqueado** (see section 6).
Countdown	When the bot pauses on purpose, it shows the time left (for example `1:30`).
Jogo (on screen in English: "Game")	Hides or shows the Web App screen.
Recarregar	Reloads the EA Web App.
Iniciar (start) / **Parar** (on screen in English: "Stop")	Turns the bot on or off. **Iniciar** only works with an active license.

Tabs

1. **Mercado** (on screen in English: "Market") — what to buy, what to sell for, auto-listing and relisting.
2. **Segurança** (on screen in English: "Safety") — pace, action cap, pauses and rest.
3. **Registro** (on screen in English: "Log") — what the bot did in this session, newest on top. You can clear it. Clearing does not undo any purchase or sale.
4. **Licença** (on screen in English: "License") — key, covered version, features (auto-buy, relisting) and unlinking.

The **Mercado** and **Segurança** options **save automatically** on this computer. Closing the app does not erase your targets.

Important: the bot does not click on the Web App screen

The bot does not click on the game screen. Changes show up in the Web App when you open the right list again (**Metas de transferência** / Transfer Targets, **Lista de transferências** / Transfer List) or click **Recarregar**. The panel's **Registro** is the real-time confirmation; the EA screen may be out of date until you go into it.

---

4. Mercado tab

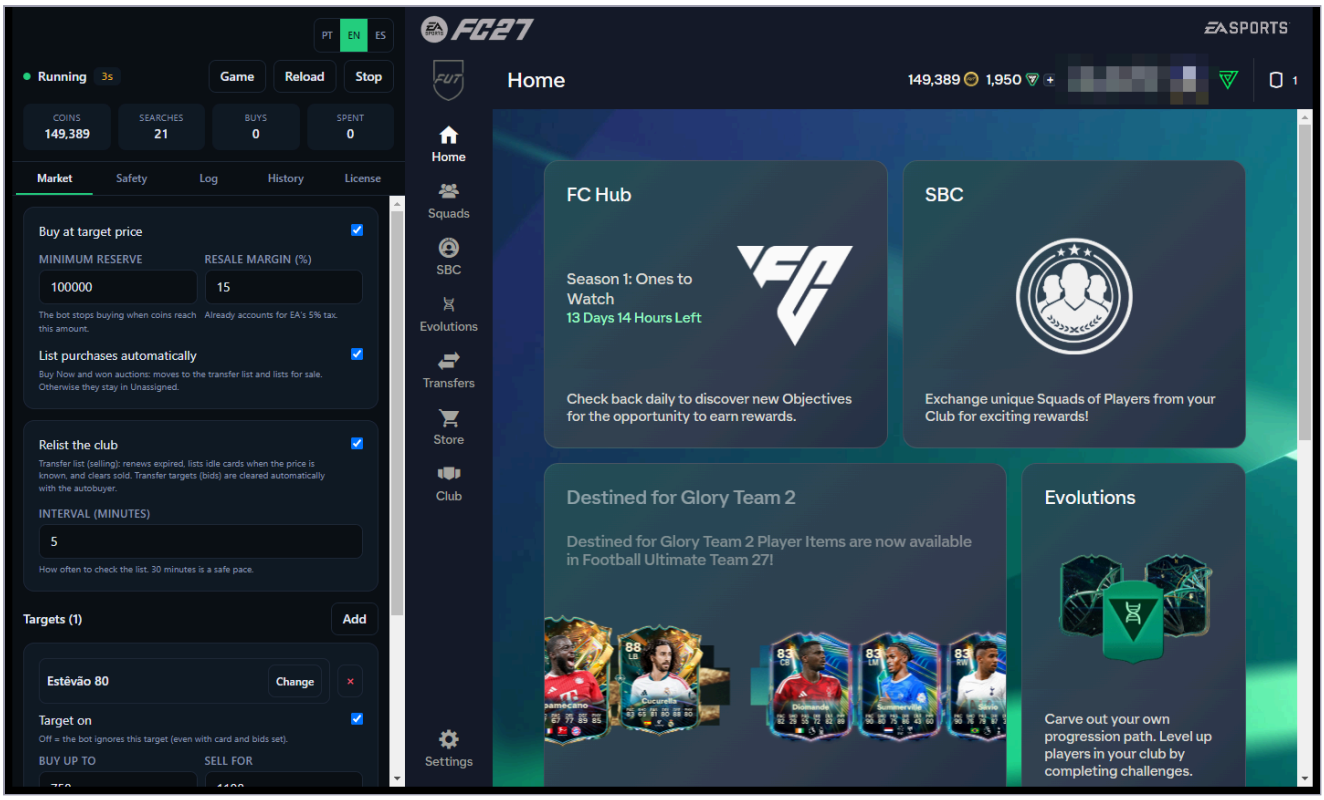

Figure 2 — The Mercado tab ("Market") with the bot "Running": top bar (PT / EN / ES, "Game", "Reload", "Stop"), session numbers, the tabs, the buying and relisting options, and one target. On the right, the EA Web App. The values in the image are an example, not the factory defaults (the defaults are in the text below).

4.1 Buying

- **Comprar por preço-alvo** (on screen in English: "Buy at target price") — master switch for searching. When off, the bot does not look for cards, even if targets are filled in.
- **Reserva mínima** (on screen in English: "MINIMUM RESERVE") — coin floor. The bot stops buying when your usable balance falls below the cheapest target. Purchases stay paused until money comes in (a sale that completes, for example). Default: **1,000**.
- **Margem de revenda (%)** (on screen in English: "RESALE MARGIN (%)") — used only when the target has **no Vender por**. It already includes the **5%** tax EA takes on a sale. A 0% margin tries to break even, rather than sell at a loss because of the tax. Default: **15%**.
- **Listar automaticamente o que comprar** (on screen in English: "List purchases automatically") — off by default.
    - On: what you buy via buy now and auctions you win leave **Não atribuídos** (unassigned) / **Metas de transferência**, go to the **Lista de transferências** and are put up for sale.
    - Off: the card stays where it is; the bot does not list it.

4.2 Relistar o clube

- **Relistar o clube** (on screen in English: "Relist the club") — off by default. Turns on care of the **Lista de transferências** (the sale list, not the Transfer Targets): removes what has sold, puts expired items back at the same price, and lists idle cards when the bot knows their price.
- **Intervalo (minutos)** (on screen in English: "INTERVAL (MINUTES)") — how often this clean-up runs. The same interval applies to clearing the **Metas de transferência**. Default: **30**. The on-screen text says 30 minutes is a safe pace. The first pass happens right after you start, not only after the full interval.

If both switches (**Comprar por preço-alvo** and **Relistar o clube**) are off, the bot warns that it will start and sit idle.

4.3 Targets (cards)

To create a target:

1. Click **Adicionar** (on screen in English: "Add"). Each card is one player card.
2. Search for the card **by name**.
3. **Click the card in the list.** Typing the name alone does not activate the target.
4. Make sure **Alvo ativo** (on screen in English: "Target on") is on. When off, the bot ignores this card. (This is not the same as **Dar lances**.)
5. Fill in the caps and the sale price:
    - **Comprar até** (on screen in English: "BUY UP TO") — buy-now cap. The bot pays at most this, on a listing that already has "Comprar já" (buy now).
    - **Vender por** (on screen in English: "SELL FOR") — resale price for this target. Empty = uses the global **Margem de revenda (%)**. When filled in, the bot uses **this** value, not the purchase price and not the margin.
    - **Dar lances** (place bids) — when you turn it on, **Comprar até** is reset to zero and the buy cap becomes the bid cap (bid-only mode). To do both, turn on **Dar lances** and **fill in Comprar até again**.
    - **Lance até** (bid up to) — bid cap. Minimum accepted by the market: **150**. If it is below that when you leave the field, the panel raises it to 150.

What each combination does:

Comprar até	Dar lances	Effect
greater than 0	off	Buy now only, up to that value.
0	on, with Lance até	Bids only, up to that cap. No buy now.
greater than 0	on	Both: one buy-now search and one bid search per round.

When you start, the **Registro** shows the mode of each target (see section 6.3).

How searching works:

- With several targets, the bot works on **one target at a time**, in rounds. You can add a gap when switching cards and another at the end of the round (**Segurança** tab).
- The search only looks at the **first page** of EA results (up to about 21 listings), not the whole market. On the next pass it searches again.
- Buy now and bids do not fit in the same EA filter. That is why, with both on, there are two searches.
- A chemistry style applied **to a player card** is not a filter of a player target. A card target buys that card; the style applied to it is not part of the search.

4.4 Chemistry styles

A separate section, button **Adicionar estilo** (add style). It buys the style **item** on the market (Hunter, Shadow, etc.), under Consumíveis (consumables). It does **not** buy a player who already has the style applied.

- The list is split into outfield and goalkeeper.
- Fields: **Ativar estilo** (activate style), **Comprar até**, **Vender por**. Styles do **not** have **Dar lances** (buy now only).
- **Testar** (test) — runs one search without buying, to check that the type and cap match what EA shows.
    1. Make sure the bot is **Parado** (stopped).
    2. Keep the club open in the Web App.
    3. Click **Testar**.
    4. See the result in the **Registro**.
- To check by hand in the Web App, the on-screen text explains the path (Portuguese Web App names): Transferências → Consumíveis → Estilos → choose the style → Buscar (transfers → consumables → styles → choose the style → search).

4.5 How buying and selling work

Buy now

- If there is a listing with "Comprar já" within the cap, and your balance (minus the **Reserva mínima**) covers it, the bot buys.
- Someone else may take the card first. That is normal and is not a failure. The log says: "A carta saiu do mercado antes da compra" ("The card left the market before the purchase").

With **Listar automaticamente o que comprar** on, the card then goes to the **Lista de transferências** and is listed like this:

- listing duration: **1 hour**;
- "Comprar já" = the target's **Vender por**, if filled in; otherwise the margin on top of the price paid;
- starting bid = one step **below** "Comprar já" (that is the format the market expects).

Price steps. The market does not accept just any number. Prices move in steps:

Range	Step
up to 1,000	50
up to 10,000	100
up to 50,000	250
up to 100,000	500
above	1,000

- Market floor: **150**.
- **Vender por** is rounded **down** to the step (you asked for that value at most).
- The margin, when there is no **Vender por**, rounds **up**, so the 5% tax does not turn the sale into a loss.

Bids

- The bot only bids if the next valid bid fits within the cap, the auction is still active, and you are not already the highest bidder.
- It does not bid an amount equal to or higher than that listing's "Comprar já" (in that case buy now is the way).
- When it bids, the coins are **locked** on the server. The **Moedas** (on screen in English: "COINS") counter drops right away. The card is **not** a purchase yet.
- If someone outbids you, or the auction closes without you in front, the log says the bid was lost and **returns** that amount to **Moedas**.
- When your own bid is raised, only the **difference** comes out of **Moedas** (the previous amount comes back and the new one is locked).
- If you win, then it counts as a purchase and as spending, at the winning bid amount. The card only arrives if the auction closes with you in front.
- The bot waits for the auction to end (with a margin) before treating a bid that disappeared from the list as lost. If the Transfer Targets show you have already been outbid, the coins come back sooner.

Won auction

- It appears in **Metas de transferência** (Transfer Targets), under **Itens ganhos** (won items). EA often shows the status as **Expirado** (expired), not as "closed". It is still a win if you held the highest bid.
- With **Listar automaticamente o que comprar** on, the bot takes the item out of Transfer Targets, sends it to the sale list and lists it. The price is the **Vender por** of that card's target (or of the style, if it is a consumable). Without **Vender por**, it uses the margin on top of what was paid.
- In the log, the name may appear as the card's id if the bot cannot match the item to a target.
- Items that were **already won** in Transfer Targets when you started the bot are also included in this listing, as long as auto-listing is on and the price can be known (bid paid or the target's **Vender por**).

- Without auto-listing, the won item stays in Transfer Targets / **Não atribuídos**. The bot does not list it.

4.6 Two different lists (common mistake)

In the Web App	What it is	What the bot does
Metas de transferência (Transfer Targets)	Bids and watched items. Sections such as active bids, watched ("de olho") and **Itens ganhos**.	Removes expired or lost auctions. Won items, with auto-listing on, go up for sale.
Lista de transferências (Transfer List)	What is **for sale**, expired, sold, or idle without a listing.	With **Relistar o clube**: clears sold items, puts expired ones back at the same price, lists idle ones if it knows the price.

- A freshly listed card sits in the **Lista de transferências**, **for sale**, not in Transfer Targets. To see it, open the sale list in the Web App (you may need to open the screen again).
- Expired items are put back **at the price they already had**. The bot does not recalculate the margin in that case.
- An idle card with no known price is **not** listed; the log warns that the price was missing. The bot does not make up a value.
- Won items in Transfer Targets are not deleted by the clean-up; if auto-listing is on, they go up for sale.
- The clean-up (Transfer Targets + sale list) runs at the configured interval, **before** the next search, and also on the first pass after starting.

---

5. Segurança tab

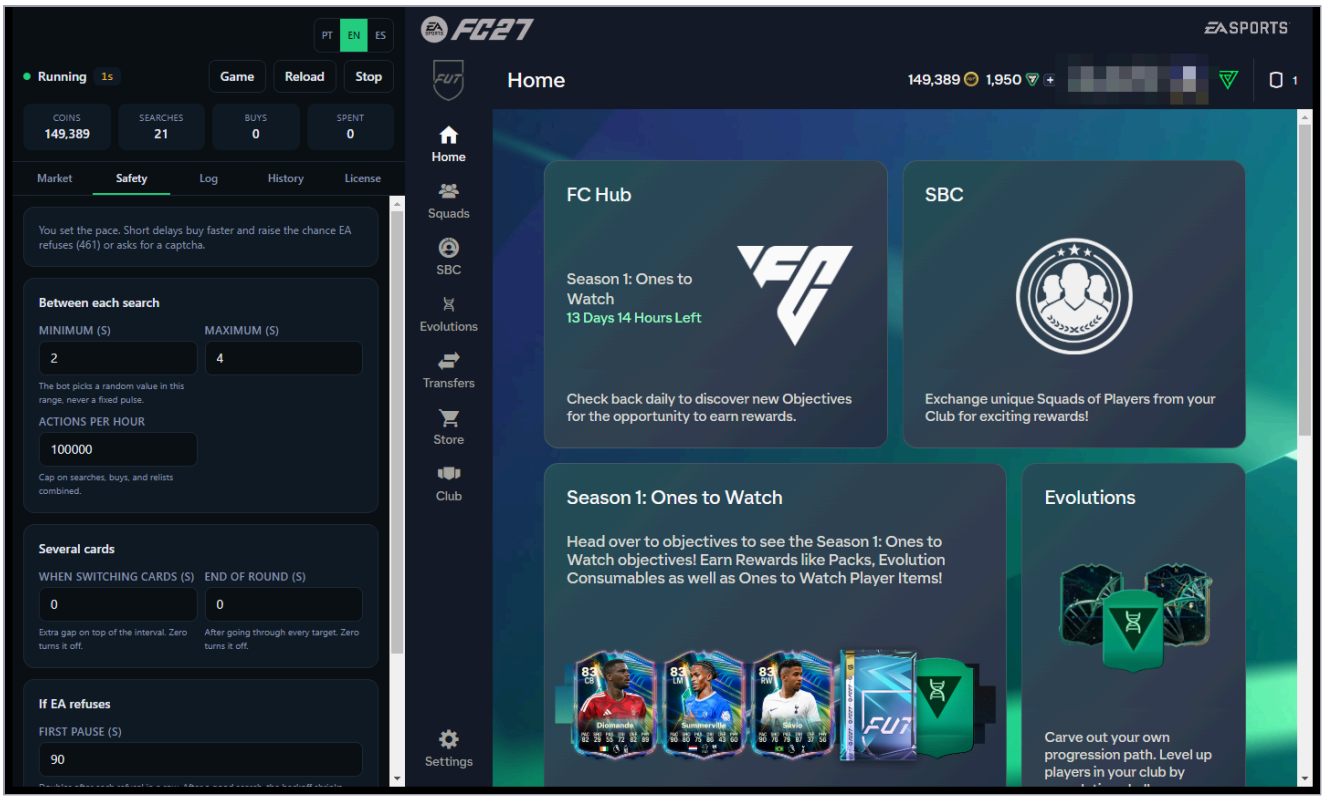

Figure 3 — The Segurança tab ("Safety"), with the blocks "Between each search", "Several cards" and "If EA refuses". The values in the image are not the factory defaults; the defaults are in the table below. Shorter timings increase EA refusals and the chance of a captcha.

The on-screen text says: you set the pace. Short timings buy faster and increase the chance that EA refuses requests or asks for a captcha.

Factory defaults:

Field	Default	Effect
Mínimo (s) (on screen in English: "MINIMUM (S)") / **Máximo (s)** (on screen in English: "MAXIMUM (S)")	8 s and 14 s	**Random** wait between actions. Never a fixed interval.
Ações por hora (on screen in English: "ACTIONS PER HOUR")	120	Cap on searches, purchases and relists combined.
Ao trocar de carta (s) (on screen in English: "WHEN SWITCHING CARDS (S)")	0	Extra gap when changing target. Zero turns it off.
Fim da rodada (s) (on screen in English: "END OF ROUND (S)")	0	Gap after going through all targets. Zero turns it off.
Primeira pausa (s) (on screen in English: "FIRST PAUSE (S)")	90 s	If EA says to slow down, the bot pauses for this time. The pause **doubles** with each consecutive refusal. A search that works reduces the back-off.
Trabalha (min) / **Descansa (min)** (work / rest, minutes)	45 and 10	After 45 minutes running, it rests for 10. Status **Descansando** (resting). Zero in either one turns resting off.

- During these pauses the status shows **Em espera** (on hold) or **Descansando**, with a countdown in the bar. It is not frozen.
- These fields can be changed, but smaller values increase EA refusals and the chance of a captcha. The defaults are slow on purpose; lowering the timings is your own risk (see the warning at the top).

---

6. Reading the panel: Moedas, statuses and Registro

6.1 Session numbers

The numbers reset when the bot stops and starts again, except for the balance the game already has.

Number	Meaning
Moedas (on screen in English: "COINS")	Balance the bot uses to decide whether it can still buy.
Buscas (on screen in English: "SEARCHES")	Market queries in this session.
Compras (on screen in English: "BUYS")	Buy-now purchases and won auctions.
Gasto (on screen in English: "SPENT")	Total paid for those purchases.

How Moedas moves:

- The **Moedas** number follows purchases, locked bids and returned bids in real time.
- A bid that is still live does **not** count in **Compras** or **Gasto**. It only locks coins. If you lose, the coins come back to the counter. If you win, then it counts as a purchase and

as spending.
- The real balance also goes up when a sale completes on the server, but the full balance is read from time to time (about every **10 minutes**), not every second. That is why a sale that just went through may take a while to show in **Moedas**, while a lost bid comes back as soon as the bot notices it.
- If the balance hits the **Reserva mínima**, the status goes to **Em espera**, purchases pause, and the log explains why. Relisting can continue.

6.2 Statuses

Status	What it means
Parado (stopped)	Bot off. You can edit settings and test styles.
Aguardando login (waiting for login)	The club is not open in the Web App, or the session dropped. Enter Ultimate Team or click **Recarregar**.
Rodando (on screen in English: "Running")	Searching, buying or looking after the lists.
Em espera (on hold)	Planned pause: coin reserve, EA refusal, gap between cards, or incomplete target. Read the yellow line and the **Registro**.
Descansando (resting)	Long pause from the **Segurança** tab. It resumes on its own.
Bloqueado (blocked)	EA asked for verification, or the license is not valid. Resolve it on the game screen or in the **Licença** tab. The bot does not continue on its own after a captcha.

6.3 Registro

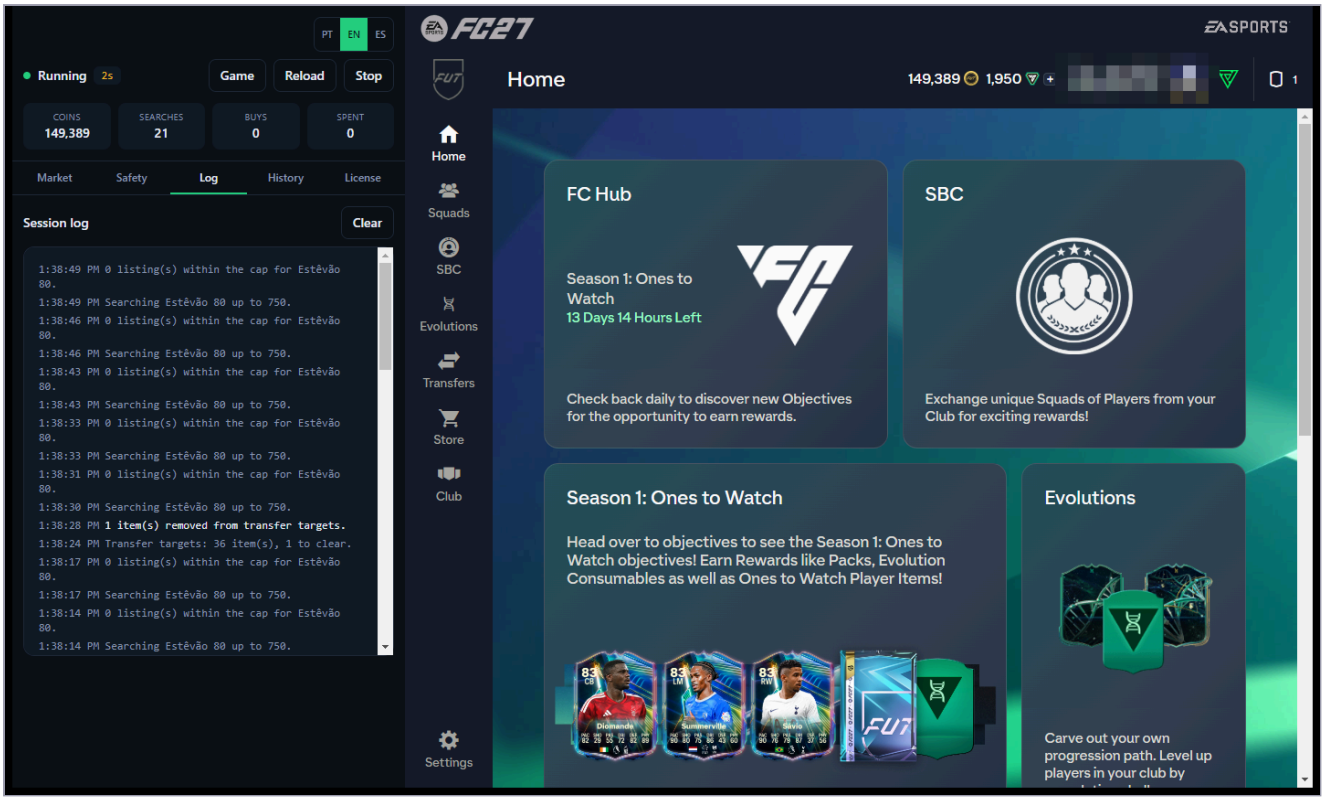

Figure 4 — The Registro tab ("Log"), titled "Session log", with the "Clear" button and the newest lines on top. In this screenshot the log lines are in English; below, each line is quoted in Portuguese with a translation.

Newest on top. Colors: purchases highlighted, warnings in yellow, errors in red. You can clear the log; that does not undo any purchase or sale.

Log line	What it means
"Sessão do Ultimate Team detectada." ("Ultimate Team session detected.")	You can start working.
"Bot iniciado. N alvo(s). Intervalo X–Y s entre buscas." ("Bot started. N target(s). Interval X–Y s between searches.")	The bot started, with N targets and a wait of X to Y seconds.
"Alvo NOME: só lances até …" / "só compre já até …" / "compre já até …; lances até …" ("Target NAME: bids only up to …" / "buy now only up to …" / "buy now up to …; bids up to …")	The mode of each target (see the combinations table in section 4.3).
"Buscando …" ("Searching …")	One market query, not a purchase.
"Lance de … Maior lance por enquanto" ("Bid of … Highest bid for now")	Coins locked; the card is not yours yet.
"Lance perdido: …. N moedas devolvidas." ("Bid lost: …. N coins returned.")	Someone outbid you or the auction closed without you; the coins are back in the counter.
"Ganhou o leilão: … por …" ("Won the auction: … for …")	Auction won; it now counts as a purchase and spending.
"N leilão(ões) ganho(s) nas Metas — listando." ("N auction(s) won in Transfer Targets — listing.")	The bot is sending won items up for sale (auto-listing on).
"Listado … por …" ("Listed … for …")	Listing created in the **Lista de transferências**.
"Metas de transferência: N item(ns), N para limpar." ("Transfer Targets: N item(s), N to clear.")	Summary of the Transfer Targets clean-up.
"Lista de transferências: N carta(s) — N à venda, N expirada(s), N parada(s), N vendida(s)." ("Transfer List: N card(s) — N for sale, N expired, N idle, N sold.")	Summary of the sale list.
"N venda(s) retirada(s) da lista." ("N sale(s) removed from the list.")	The bot cleared cards that **had already sold**.
"A EA pediu verificação. Resolva na aba do jogo." ("EA asked for verification. Resolve it in the game tab.")	Captcha. Stop and solve it on the game screen; do not keep restarting.
"A EA pediu para ir mais devagar." ("EA asked to slow down.")	Automatic pause. If it repeats, raise the intervals in the **Segurança** tab.
"Saldo chegou na reserva mínima." ("Balance reached the minimum reserve.")	Purchases paused until money comes in.
"A carta saiu do mercado antes da compra" ("The card left the market before the purchase")	Someone else bought it first. Normal, not a failure.

"2 vendas retiradas da lista" ("2 sales removed from the list", for example) means that **other** cards had already sold and the bot freed up the space. The coins from those sales were already in your balance. It does not mean the bot cancelled a new listing.

"Nothing to do" messages appear if you start without setting things up:

- Auto-buy (**Comprar por preço-alvo**) on with no card and no style.
- Name typed without clicking the card in the list (just ticking bids is not enough).
- Target filled in, but with **Alvo ativo** off.
- **Comprar por preço-alvo** and **Relistar o clube** both off.

---

7. Troubleshooting

The bot does not start / sits idle without searching

1. Is the **Iniciar** button disabled? Activate the license in the **Licença** tab (section 2).
2. Is the status **Bloqueado**? EA asked for verification (solve it on the game screen) or the license is not valid (check the **Licença** tab).
3. Started, but not searching? Check:
    - Is **Comprar por preço-alvo** on?
    - Does the target have **Alvo ativo** on?
    - Was the card **clicked in the list**, not just typed?
4. Read the **Registro**: the "nothing to do" messages (section 6.3) tell you what is missing.

The bot does not find the session (stays at Aguardando login)

1. In the Web App, log in to EA **and** enter your Ultimate Team club. The login screen alone is not enough.
2. If the club is already open and the status does not change, click **Recarregar**.
3. Wait for "Sessão do Ultimate Team detectada." ("Ultimate Team session detected.") in the **Registro**.

License on another PC

1. A license works on **one computer at a time**. The app does not move the license by itself.
2. Free the slot:
    - on the old computer, in the **Licença** tab, click **Desvincular este computador** (on screen in English: "Unlink this computer"); or
    - if the message shown when activating asks you to, free the slot in your account at fcuteam.com.
3. On the new computer, paste the same key in the **Licença** tab and click **Ativar**.
4. To use a PC that was unlinked again, just **activate again** with the same key.

I bought it and it was not listed (or was listed at the wrong price)

- **Not listed: Listar automaticamente o que comprar** is off (that is the default). Without it, the card stays in **Não atribuídos** / **Metas de transferência** and the bot does not list it.

- **An idle card was not listed:** if the bot does not know the price, it does not list it; the log warns that the price was missing.
- **Listed at the margin price instead of the price you wanted:** the target's **Vender por** was empty. Fill in **Vender por**.
- **Won the auction and the card disappeared from Transfer Targets:** it went to the **Lista de transferências**, for sale, because auto-listing was on.
- **Listing at the wrong price:** the bot does not change the price of a listing that is already live. Fix it in the list in the Web App or wait for it to expire. Note: with **Relistar o clube** on, the expired item comes back **at the same price**.

Lost bid and coins

1. When the bot bids, **Moedas** drops right away because the coins are locked. That is not a purchase.
2. If the bid is lost, the log shows "Lance perdido: …. N moedas devolvidas." ("Bid lost: …. N coins returned.") and the coins come back to the counter.
3. The bot waits for the auction to end (with a margin) before treating a bid that disappeared from the list as lost; if Transfer Targets already show you were outbid, the coins come back sooner.
4. **Coins from older bids did not come back:** the automatic return in the counter applies to bids lost with this version of the app. The full balance also updates on the periodic read (about 10 minutes).
5. **A sale completed but does not show in Moedas:** wait for the periodic balance read (about 10 minutes).

The EA screen did not change

1. The bot does not click on the Web App, and the EA page does not update by itself.
2. Open the matching list again (**Metas de transferência** / Transfer Targets or **Lista de transferências** / Transfer List) or click **Recarregar**.
3. The panel's **Registro** is what confirms what happened.
4. Remember: a freshly listed card is in the Transfer List, not in Transfer Targets; a won auction may show as **Expirado** under **Itens ganhos**.

Captcha (Bloqueado status)

Solve the verification on the game screen. Do not keep restarting the bot in a loop or try to "get around" the verification. The bot does not continue on its own after a captcha.

---

8. What the bot does not do

- It does not play matches, open packs, or touch SBCs, squad or club outside the transfer market.
- It does not log in to your EA account for you. You log in yourself, in the built-in Web App.

- It does not show each action live inside the EA page. The page does not follow along by itself.
- It does not scan every page of the market. Only the first page of each search.
- It does not bid on chemistry styles, only buy now.
- It does not sell below **Vender por** to "get rid of it quickly", and it does not track other people's prices after listing.
- It does not change the price of a listing that is already live. Expired items come back **at the same price**. To fix a wrong listing, change it in the list yourself or wait for it to expire.
- It does not guarantee profit. The margin and **Vender por** are your choices. EA keeps 5% of the sale.
- It does not prevent bans.
- It does not move the license to another PC by itself. You must unlink and activate again.
- There is no mobile app and no macOS version.

---

9. Glossary

EA terms are given with the Portuguese name used in this manual.

- **Compre já** (buy now) — buy immediately at the asking price.
- **Lance** (bid) — an offer in a timed auction. The coins stay locked until you win or lose.
- **Metas de transferência** — bids / watch list (in the English client: Transfer Targets).
- **Lista de transferências** — sale list (Transfer List).
- **Não atribuídos** (unassigned) — bought items that have not yet gone to the club or up for sale.
- **Itens ganhos** (won items) — auctions won, inside Transfer Targets.
- **Expirado** (expired) — in the sale list, a listing that ended without selling. In the won-items area of Transfer Targets, "Expirado" can be an auction you **won**.
- **Estilo de chemistry** (chemistry style) — a consumable (Hunter, Shadow…). Not the player.
- **Reserva mínima** (minimum reserve) — coins the bot refuses to spend.
- **Vender por** (sell for) — fixed resale price for that target. It takes priority over the margin.
- **Margem de revenda** (resale margin) — percentage on top of what was paid, already including the 5% tax.
